Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

The prosecution is reopen in this application to give further consideration to claims 1-5.
claims 1-5 are withdrawn from issue and are rejected below.

Response to Amendment

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Hara et al.(U.S. Patent No. 5,803,197).

As to claim 1, Hara et al. disclose a method of controlling handling of a vehicle having a controllable longitudinal clutch for all-wheel systems, comprising the steps of: separately determining rotational wheel speeds of each side of the vehicle by analyzing the rotational wheel speeds as a function of the driving speed and the steering angle; comparing said determined wheel speeds on each side; and setting a constant torque as a function of the driving speed and the steering angle when a difference between said determined wheel speeds on each side exceeds a definable rotational speed difference (See abstract; col. 1, lines 6-15, 20-29; col. 13, lines 44-56; col. 17, lines 38-col. 18, lines 43; col. 31, lines 26-31).

As to claim 2, Hara et al. disclose the defineable rotational speed difference is stored in a characteristic diagram for any operating condition (See col. 31, lines 26-31).

As to claim 3, Hara et al. disclose the steering angle is checked with respect to a cornering and, when a cornering is detected, an offset is determined which is added to the defineable rotational speed difference of the rotational wheel speeds (col. 17, lines 38-col. 18, lines 43; col. 20, lines 25-33).

As to claim 4, Hara et al. disclose the step of setting a slip control (See col. 17, lines 38-65; col. 20, lines 46-58).

As to claim 5, Hara et al. disclose the vehicle has a fixed torque distribution (See abstract).

Response to Arguments

Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gertrude Arthur-Jeanglaude whose telephone number is (703) 308-7564. The examiner can normally be reached on Monday-Friday from 8:30 a.m. to 6:00 p.m..
